

This is information about the land in 1880 a house, barn and an over head manue were built. The land you have been looking at has been in grass for at least 75 years or more to change that is allmost impossable. what you do have are 4 concret silos (3 side and a floor). Buying trusses to put a roof on would be out of the question three of them get setting sun. then collect the rain water off the roof to water plants or small animals. you need to use your resources and think out of the box
